

ADULT LORIKEET PELLETS BLUEBERRY

Peckish Naturals Lorikeet Pellets with added Blueberries is a nutritionally balanced feed in a convenient pellet form that promotes healthy growing and breeding Lorikeets. Made from all natural ingredients, you can entice your bird with the natural sweetness of the added blueberry, while providing them with antioxidants and increased protein to maintain good feather condition.

Feeding Instructions:

Once your Lorikeet is fully fledged, which takes around 6-8 weeks, you can begin transitioning them from Lorikeet Blend to Lorikeet Pellets. Start their transition by feeding them a 50:50 ratio of the blend and pellets. This may require initially crumbling the pellets. Once they become accustomed to the size and texture, reduce the amount of their former blend over several weeks until they are consuming a complete pellet diet. Can be supplemented with suitable fresh fruits and vegetables.

Ingredients:

Selected from: Wheat, Dextrose, Corn, Rice Flour, Soybean Meal, Blueberry Powder, Vegetable Oil, Water, Vitamin and Mineral Premix.
