## JUNIOR REARING BLEND EGG & MEALWORM

Peckish Junior Rearing Blend with added Egg and Mealworms is a nutritious blend for hand-rearing chicks and young birds. Made from all natural ingredients, the combination of egg and mealworm provides your bird with the necessary vitamins, minerals, calcium and protein for growing bones, healthy organ function, consistent weight gain and strong feather development to transition to fully fledged.

### Feeding Instructions:

Ideal to use from day one. When hand-rearing, feed moist by mixing with water. The frequency of feeding and the blend's consistency will vary according to species and age. Begin transitioning to the appropriate softbill blend or hookbill pellet once your bird is fully fledged. For small birds the transition to fully fledged takes between 4-8 weeks on average, whereas larger birds take between 10-18 weeks on average.

### Ingredients:

Selected from: Wheat, Maize, Soybean Meal, Rice Flour, Dextrose, Egg Powder, Dried Mealworm Flour, Vegetable Oil, Water, Vitamin and Mineral Premix, Blueberry Flavour Powder
