PERFORMANCE LAYER MIX

For quality eggs and your hen's health, Peckish Performance Layer Mix has been specially formulated for all breeds of laying hens from 18-20 weeks old. Peckish Performance Layer Mix is a complete ration, featuring high protein pellets to deliver optimum vitamins and minerals, and the energy they need for steady healthy growth.

Feeding Instructions:

To be fed ad-lib from 18-20 weeks old onward or about 10-14 days prior to commencement of lay. Egg production usually begins at around 20-22 weeks of age. Consumption of Performance Layer Mix may vary depending on available supplements such as wheat or kitchen scraps. However, as this is a higher protein and energy ration, supplements are not required. A recommended minimum is upwards of 110-125 grams per bird per day. This may also vary depending on hen size, egg productions, breed and climate change.

Ingredients:

Selected from: Wheat, Barley, Sorghum, Maize, Lupins, Black Sunflower, Vegetable Oil, Canola Meal, Soya Meal, Lime, Vitamin and Mineral Premix.
