READ PRODUCT WARNINGS PRIOR TO READING INSTRUCTIONS OR USING PRODUCT

WARNINGS:

- ⊗ Do not use as a toy.
- ⊗ Do not allow pet unsupervised access to the WagTime Comfort Pillow if they are known for aggressive or destructive behaviour.
- ⊗ Do not spray any fragrances, liquids, gels, powders, or aerosols on the pillow.
- ⊗ Do not insert any items that were not specifically designed for the pillow.
- ⊗ Do not immerse or dampen the Heartbeat Simulator or Warmth Simulator.
- ⊗ Do not exceed 60 seconds in the microwave when heating your Warmth Simulator.
- ⊗ Do not expose to open flames.
- ⊗ Do not continue use if any part has become damaged.

IMPORTANT NOTE: Be sure to remove Heartbeat Simulator and Warmth Simulator before machine washing.

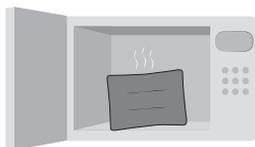

INSTRUCTIONS

1. How To Heat Your Warmth Simulator

Begin by removing the **Warmth Simulator** from its protective pocket by gently separating the opposing velcro strips. Place on a clean, dry surface in the microwave for 30-60 seconds.

WARNING: Do not exceed 60 seconds in the microwave as it may damage the Warmth Simulator and cause it to smoke, melt, or burn.

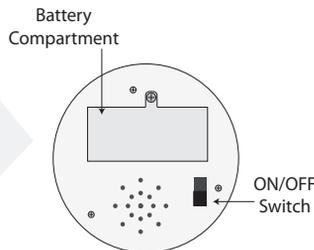

The **Warmth Simulator** will now be warm to the touch. Carefully remove it from the microwave using tongs or a heat protective glove and insert it back into its internal pocket. Reseal by pressing the velcro strips firmly together.

2. How To Initially Activate Your Heartbeat Simulator

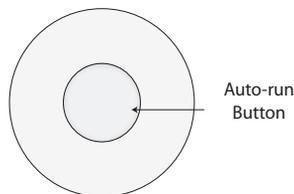

Remove the **Heartbeat Simulator** from its internal protective pocket and remove the plastic anti-conductivity strip. The ON/OFF switch is located directly below the battery compartment door. Move the switch to ON. To test the **Heartbeat Simulator**, flip the unit over and press the large centre button. You should hear a slight heartbeat sound and feel a gentle vibration.

NOTE: Your pet's hearing is much greater than yours, therefore it will seem quieter to you.

3. How To Activate Your Heartbeat Simulator

The **Heartbeat Simulator** should be placed in its internal pocket with the ON/OFF switch in the ON position and the large, auto-run button facing towards the smooth fabric side of the pillow. Once the **Heartbeat Simulator** is in the correct position you should be able to press the large auto-run button while it is still in its protective pocket. Upon pressing the auto-run button, the **Heartbeat Simulator** will run for 11-12 minutes before automatically shutting off. In most cases, this will be enough to calm and relax your pet. If your pet is still barking, crying, or anxious, press the auto-run button again and it will activate for a further 11-12 minutes.

RECOMENDED USES

- Perfect for small dogs, cats, puppies, and kittens.
- Helps eliminate nuisance barking and crying from pets during bedtime, kennel training, or house-training.
- Helps reduce stress and anxiety caused by separation, travel, or unfamiliar surroundings.

REPLACING THE HEARTBEAT SIMULATOR BATTERY

To replace your batteries in the **Heartbeat Simulator** simply use a Phillips head screwdriver to unscrew the back panel and reveal the battery compartment. Remove the batteries, and replace them with new AAA batteries, then place the panel back, on and screw it back into place.

For best results when using your WagTime Comfort Pillow for house-training, read the included guide. Pets may experience stress due to unfamiliar surroundings, travel, and separation. Follow the steps above as needed to help your pet fall asleep or reduce symptoms of anxiety and stress.
